

TRACEABILITY, COMPLIANCE, PRODUCTIVITY

Striving for excellence in torque control, our range of solutions deliver unerringly precise and highly accurate torque & angle measurement suited to a wide range of applications.

These products are packed with innovative features, which deliver customer value in the form of process **Traceability, Compliance** to international standards & enhanced **Productivity**, all of which ensure optimum control over the torque process.

PRODUCTS

Assembly tools

Post-assembly audits

Tool validation

Our range of products which include digital wrenches, testers & screwdrivers are specifically designed for assembly, testing & calibration purposes. As straightforward to use as mechanical tools, BMS products still retain the inherent accuracy, precision and traceability of digital tools.

SERVICES

Calibration services

Integrated solutions

Services include off-site calibration and the provision of communication protocols enabling product integration into a third-party software system.

TRACEABILITY

Capture actual installed torque & angle

Fully traceable calibration certification

All cases of over or under torque highlighted

COMPLIANCE

Validate tool accuracy

Smooth, 'no-click' action reduces risk of injury

Torque audits validate an assembly reducing product recalls

PRODUCTIVITY

Control assembly process with precise tolerances

Ergonomic design enables controlled torque application

Wireless options improve production efficiency

'Torque it right first time, every time!'
